

Flight Search

Flight Search App will help users to search over 250+ countries and 13000+ airlines. The app will provide a list of flights, fare details, airline names, and departure and arrival terminals.

The App will use HTML, CSS, Python, Flask, Jinja, aviation stack API.

Also, it will use SQL Database(SQLAlchemy library).

It will have a security key that is not going to be shown.

In order to use the app, users have to be registered or logged in to use it. Then the user has to choose departure and arrival destinations, dates and magic will happen.
